siafix
The quick change discs from sia Abrasives
**siafix quick change system**

Siafix products from Sia Abrasives offer a practical quick change system for a wide variety of sanding applications on high-alloy metal through to composites, from material removal through to surface finishing – ideal for use in hard-to-reach areas.

**Advantages**
- Quick and easy changing of the abrasive
- Suitable for a wide variety of applications
- Large product range

**Applications**
- Deburring
- Removing paint
- Removing discolouration
- Surface treatment
- Blending

---

**siafix fastening systems**

**siafix Button Mounted Pins**

Discs with the siafix fastening system have a small thread on the back and are called Button Mounted. There are two different versions of this: S type and R type.

![S type and R type](Image)

---

**siafix holders**

**Holder with spindle and thread**

The siafix pads can be fastened to mini angle grinders using a spindle or to a normal angle grinder using the M14 conversion adapter.

---

**Best Practice:**

2-step solution – the system solution

The system solution from coarse sanding through to finishing. Using a combination of coated abrasives and SCM products provides a high removal rate at first and an optimum surface finish at the end.

---

**Practical example on stainless steel bracket with TIG weld seam**

**Step 1:** 2511 siabite, grit of 60

**Step 2:** 6924 siamet hd, coarse
2511 siabite – The performance specialist for siafix discs

2511 siabite provides maximum efficiency due to the self-sharpening effect of its ceramic grit on high-alloy steel and hard to grind metals.

Advantages
• Less machine interruptions thanks to long lifetime
• Minimal effort required thanks to highly aggressive abrasive grit
• Heat-reduced cutting thanks to active additive with cooling effect
• More efficiency thanks to the highest performance

Materials
High-alloy steel, other metals with hard to grind surfaces

Product profile
- Grit type: Ceramic aluminium oxide
- Grit range: 36 – 120
- Backing: y-wt cloth
- Coating: Closed
- Bonding: Resin over resin
- Coating: Cooling additive

Applications
• Deburring
• Blending
• Removing discolouration
• Surface treatment
• Structuring and final sanding

2803 siaron – The top performer for industrial needs

The 2803 siaron special series is designed for high-alloy steels and other hard to grind metals. It comes into its own in applications such as the industrial surface treatment of weld seams and transitions as well as the removal of mill scale – thanks to a combination of high stock removal rates, low surface pressure and extremely long life.

Advantages
• Active additives with a cooling effect greatly reduce discolouration
• Excellent performance and lifetime
• High removal rate with low pressure

Materials
High-alloy steel, other metals with hard to grind surfaces

Product profile
- Grit type: Zirconia alumina
- Grit range: 36 – 180
- Backing: x-wt cloth
- Coating: Closed
- Bonding: Resin over resin
- Coating: Cooling additive

Applications
• Removing discolouration
• Surface treatment
• Deburring
• Blending
2820 siamet – The special abrasive for unalloyed steel and non-ferrous metals

As a specialist product with high stock removal rates as well as excellent edge stability and tear resistance, 2820 siamet is suitable for a wide variety of jobs ranging from removal of rust or paint to preparation for welding — whether on unalloyed steels or non-ferrous metals.

**Advantages**
- High edge stability, high tear resistance
- High performance for all metals
- Aggressive cut

**Applications**
- Surface treatment
- Deburring
- Blending

**Materials**
Unalloyed / low-alloy steel, non-ferrous metals

---

2925 sialoX – The cost-effective aluminium oxide universal series

As a cost-effective all-round abrasive with a robust cloth backing, 2925 sialoX offers high edge stability, excellent tear resistance and long life, and delivers excellent results in a variety of applications including final sanding of steels and non-ferrous metals.

**Advantages**
- High edge stability, high tear resistance
- For general use
- Long lifetime thanks to strong backing material

**Applications**
- Deburring
- Removing rust
- Removing discolouration
- Surface treatment
- Blending
- Structuring and final sanding

**Materials**
Unalloyed / low-alloy steel, non-ferrous metals
2707 siawat – The specialist for hard to grind metals

Product profile
Grit type: Silicon carbide
Grit range: 60 – 320
Backing: x-wt cloth
Coating: Closed
Bonding: Resin over resin

Advantages
• Versatile
• Ideal for glass and plastics

Applications
• Surface treatment
• Deburring
• Blending
• Structuring

Materials
High-alloy steel, other metals with hard to grind surfaces, glass, plastic, enamel and ceramic, titanium

In addition to working on high-alloy and other hard to grind metals, 2707 siawat is also very suitable for stone, glass and plastic – covering different application steps including structuring.

2824 siaflap – For market-leading performance in steel applications

Product profile
Grit type: Zirconia alumina
Grit range: 40 – 80
Backing: y-wt cloth
Coating: Closed
Bonding: Resin over resin
Coating: Cooling additive

Advantages
• Aggressive cut
• High performance for all metals

Applications
• Deburring
• Removing rust
• Removing discolouration
• Surface treatment
• Blending

Materials
Unalloyed / low-alloy steel, non-ferrous metals

Designed for general treatment of unalloyed or low-alloy steel, 2824 siaflap with zirconia alumina and a robust cloth backing provides a high removal rate and long lifetime. Another advantage is the consistent surface quality until the abrasive has been completely used up.
6250 sia scm – The flexible and powerful solution for an optimal surface finish

Advantages
- Long lifetime
- Excellent surface quality
- Suitable for general use in dry and wet sanding applications

Materials
Unalloyed / low-alloy steel, high-alloy steel, non-ferrous metals

6924 siamet hd – High-performance discs for surface finishing of steels

Advantages
- Major time-saving thanks to highest aggressiveness and highest stock removal rates
- Excellent performance on hard materials
- More durable so more resistant on edges
- Much less smearing tendency than existing products; especially at the edge of the disc when working at tight angles
- Excellent and consistent finish over a long period of time

Materials
Unalloyed / low-alloy steel, high-alloy steel

6250 sia scm nonwoven abrasives are versatile to use and impress when working on steel due to their long lifetime, high removal rate and perfectly conditioned surfaces.

Advantages
- Deburring
- Removing rust and paint
- Removing discolouration
- Surface treatment
- Blending
- Structuring / finishing

Materials
Unalloyed / low-alloy steel, high-alloy steel, non-ferrous metals
6140 siafleece sd – Delivers constant performance for an even finish

6140 siafleece sd is suitable for applications such as removing rust, paint and discolourations and also for structuring / finishing. It impresses not only with a consistent sanding pattern, but also with long lifetime and low clogging.

**Advantages**
- Consistent sanding pattern and long lifetime thanks to even grit distribution
- High tear resistance
- Low clogging

**Applications**
- Removing rust and paint
- Removing discolouration
- Surface treatment
- Blending
- Structuring / finishing

**Materials**
Unalloyed / low-alloy steel, high-alloy steel, non-ferrous metal, other metals with hard to grind surfaces

| Product profile | Grit type: Silicon carbide | Grade: Extra coarse |
|-----------------|---------------------------|
| Grit range:     | Nonwoven                  |
| Backing:        | Mechanical                |
| Coating:        | Resin over resin          |

6300 siastrip – The specialist abrasive for the removal of paint and rust

6300 siastrip for unalloyed and low-alloy steel leaves nothing to be desired in terms of removal rates and product life, and also has the advantage of low clogging.

**Advantages**
- Low clogging
- Excellent performance and lifetime

**Applications**
- Removing rust and paint

**Materials**
Unalloyed / low-alloy steel

Backing pad adapter for siafix discs and rotary sanders

M14 adapter
- Fits conventional angle grinders
- Suitable for R type and S type pad
Nonwoven abrasives

Nonwoven abrasives have the flexibility and conformability needed to produce an even surface finish on any workpiece. Nonwoven abrasives are therefore especially suitable for applications with low cutting speed and low contact pressure.

Structure of nonwoven abrasives

| Backing | Polyamide fibres |
| Abrasive grit | Brown aluminium oxide, white aluminium oxide, silicon carbide and aluminosilicate |
| Binder resin | Phenol resin, polyurethane resin, acrylate |

Nonwoven products are manufactured using water-based binder resins in a single pass in the machine.

SCM products are always manufactured in a 2-stage process using binder resins. SCM abrasives are backed with our siafast technology and used in combination with a sanding pad.

Grades

Aside from the grit, the amount of binder resin also determines the hardness of the product and thus its grade. Grades are declared in an ordinal scale and as a colour, always from coarse to fine:

- Coarse
- Extra coarse
- Fine cleaning
- Extra cut
- Medium
- Fine
- Very fine
- Ultra fine
- Micro fine
- General purpose

10
### siafast range

The back of the abrasive has loops that can be easily fastened to the backing pad or hand sanding tool with hooks.

Optimum coordination between the loop length and the hook enables precisely the right strength to be ensured for all applications and customer needs.

### Advantages
- Cool cut
- Less clogging thanks to special ventilation effect
- Increased safety during the finishing of surfaces and contours due to the cushioning spring effect between the hook-and-loop surfaces
- Little dust, low moisture and minimal temperature fluctuation
